

Divya Shankar Kumar

SENIOR SOFTWARE ENGINEER

(408) 478-1791 | Dublin, CA | divyashankarkumar108@gmail.com | linkedin.com/in/divyashankarkumar

PROFESSIONAL SUMMARY

- Senior Software Engineer with 10+ years of experience across banking, payments, SaaS, digital signature, merchandising, and enterprise platforms, with strengths in system design, APIs, microservices, cloud infrastructure, developer tooling, CI/CD, reliability and developer productivity.
- 1+ years of hands-on experience building production-grade Generative AI platforms using LLM APIs (Claude, GPT), prompt engineering best practices, MCP, LangGraph, and FastAPI.
- Recognized as an SME in architecture reviews, reusable engineering patterns, distributed-system and production troubleshooting, observability, platform modernization, developer productivity, and effective communication across functional engineering teams.

TECHNICAL SKILLS

Programming and Scripting: Java, JavaScript, TypeScript, Python, Kotlin

AI Assisted Development: GitHub Copilot, Claude, Cursor, ChatGPT

Mobile Development: iOS, Swift, Xcode, React Native, Mobile Architecture, REST API Integration

Architecture and Backend: System Design, Microservices, REST APIs, GraphQL, gRPC, Service Integration, Orchestration, Distributed Systems, API Mocking, Response Mapping

Cloud and Infrastructure: AWS, Lambda, ECS, EKS, S3, RDS, CloudWatch, Docker, Kubernetes, Kafka, RabbitMQ

CI/CD and Source Control: GitLab CI, Jenkins, GitHub Actions, Maven, Gradle, Node

Observability and Monitoring: Grafana, Datadog, CloudWatch, New Relic, Prometheus

Testing and Quality: API Testing, Integration Testing, Automated Testing, TestNG, JUnit

Databases: SQL, MySQL, Oracle, Postgres

WORK EXPERIENCE

Senior Software Engineer | Varo Bank | San Francisco, CA Jun 2020 – Dec 2025

Tech: JavaScript, TypeScript, React Native, REST APIs, AWS, Docker, GitLab CI/CD, Grafana, GitHub Copilot

- Developed 10–15 RESTful services and backend layers for critical digital banking workflows including authentication, payments, account activity, and transaction processing supporting high-volume customer transactions.
- Served as an SME for Kotlin-to-React Native platform modernization and influenced engineering practices across 4 cross-functional agile teams through architecture reviews and code reviews.
- Designed GitLab CI/CD, Docker, and AWS delivery workflows that standardized build and deployment processes and enabled 2× faster deployments.
- Built Grafana-based observability and operational tooling correlating application, API, infrastructure, and workflow signals, reducing MTTR by approximately 30% through faster root-cause identification.
- Experience with AWS-based microservices architecture for digital banking workflows integrating REST APIs and distributed services across containerized environments to improve resilience and support independent deployment.
- Designed Redis/ElastiCache-based caching strategies for frequently accessed application and reference data, reducing database load and improving API response latency for high-volume services.
- Improved API performance by analyzing algorithmic complexity, memory allocation, database access patterns, serialization overhead, and network calls, eliminating bottlenecks in latency-sensitive service paths.
- Designed asynchronous service workflows using Kafka/RabbitMQ event processing, consumer groups, retries, and dead-letter handling, reducing synchronous coupling across digital-banking services and improving failure isolation.
- Improved performance, reliability, and infrastructure efficiency through service-level diagnostics, retry and synchronization strategies, contributing to an estimated 20–25% improvement in service response and troubleshooting efficiency.
- Developed and maintained native iOS components using Swift and Xcode, integrating native capabilities with React Native modules and REST APIs for digital-banking workflows.
- Applied GitHub Copilot and AI-assisted development workflows for code generation, refactoring, unit-test creation, debugging, documentation, and code-review support, reducing repetitive development effort by approximately 15–20%.
- Supported iOS build, signing, provisioning, dependency management, and CI/CD workflows using Xcode and GitLab CI/CD, improving build reliability and release readiness across mobile environments.
- 1+ years of experience integrating Generative AI models/LLM'S using FastAPI, LangGraph, and PgVector into backend services for inference, orchestration, and evaluation.
- Built a **Retrieval-Augmented Generation (RAG)** pipeline using **LangChain** and **Pgvector** reducing hallucination rates by **25%** and achieving a retrieval accuracy of **94%**

Senior Software Engineer | HelloSign, A Dropbox Company | San Francisco, CA Nov 2017 – May 2020

Tech: Java 8, JavaScript, REST APIs, AWS, Docker, Jenkins, Maven, Git, Postman

- Designed and developed reusable Java and JavaScript service frameworks and integration components for HelloSign's SaaS platform, reducing duplicated implementation effort by approximately 25% across critical document-signing workflows.
- Built REST API and distributed-service integrations supporting document creation, signature workflows, authentication, and backend service communication, with focus on service contracts, error handling, and resilient request/response processing.
- Developed microservice integration patterns for independently deployed document-signing services, including dependency handling, retry behavior, service failure scenarios, and transaction-flow resilience, contributing to approximately 20–25% faster issue isolation.
- Contributed to AWS- and Docker-based microservice deployment architecture, integrating containerized services with Jenkins/Maven CI/CD pipelines, environment configuration, and independent service releases.
- Designed AWS, Docker, Jenkins, and Maven CI/CD workflows that shortened engineering feedback cycles by approximately 30% and reduced repetitive build and environment setup effort.
- Developed performance and scalability engineering solutions for workloads exceeding 5,000 requests, identified service bottlenecks, and contributed to approximately 20% improvement in performance and capacity readiness.
- Analyzed SQL execution plans and optimized joins, indexes, query predicates, pagination, and data-access patterns, reducing database latency and improving API response performance.
- Provided senior-level technical inputs through framework architecture, reusable design patterns, code reviews, technical documentation, production troubleshooting, and mentoring across engineering teams.

Software Engineer | Gap Inc | San Francisco, CA Dec 2016 – Aug 2017

Tech: Java, REST APIs, MongoDB, SQL, Git, JIRA

- Developed and enhanced Java-based backend services and REST API integrations for Gap's Global Assortment platform, supporting merchandising operations across the United States, Canada, Japan, and Hong Kong.
- Implemented service-integration components for assortment workflows, including request/response contracts, backend data processing, MongoDB persistence, and cross-service dependencies for newly developed platform capabilities.
- Supported end-to-end merchandise lifecycle functionality from style creation and market assignment through production deployment, diagnosing application, API, and database-layer issues across distributed workflows.
- Built and enhanced market-specific product capabilities including CSV exports, style grouping, assortment-planning workflows, realization flows, and UI/backend integration features for multiple international markets.
- Developed reusable Java engineering utilities and API integration components that improved service reliability, release readiness, and consistency across Global Assortment services.
- Improved production stability by strengthening service diagnostics and integration handling, contributing to an approximately 60% reduction in production defects across assortment-planning workflows.

SDET | Green Dot Corporation | Palo Alto, CA Jan 2015 – Oct 2016

Tech: Java, TestNG, SOAPUI, ReadyAPI, REST APIs, Jenkins, SeeTest, SQL, Oracle

- Supported strategic banking initiatives, including the Uber GoBank program, by validating onboarding, account creation, payments, and backend integrations.
- Performed end-to-end testing of customer registration workflows from user interface interactions through backend database validation.
- Increased integration and automation coverage by approximately 85% through the development of automated validation suites.
- Built automated API test suites using SOAPUI and ReadyAPI, improving confidence in service releases and reducing manual effort.
- Established Jenkins-based continuous testing environments and automated regression execution workflows.

Senior QA Engineer | CyberSource, A Visa Company | Foster City, CA Mar 2013 – Dec 2014

Tech: Selenium WebDriver, Java, TestNG, Bamboo, Accurev, Oracle, SQL

- Validated payment processing services across authorization, charge, and credit transaction flows supporting multiple processors and gateways.
- Developed automated test suites using Selenium WebDriver, Java, TestNG, and Visa's proprietary AV2 framework.
- Achieved 100% automation coverage for sprint deliverables through automation-first testing practices.
- Increased code coverage beyond 85% through development of extensive TestNG automation suites using a data-driven approach.

Quality Assurance Analyst | Indian Institute of Management Bangalore | India Jul 2007 – Feb 2013

Tech: UNIX, Oracle, SQL, Java, C++, Bugzilla, Selenium IDE, Selenium RC

- Supported quality assurance activities for enterprise management systems by performing functional testing, regression testing, defect tracking, and release validation activities.

EDUCATION

Bachelor of Engineering, IT | Visvesvaraya Technological University | India Jul 2003 – Jul 2007

CERTIFICATIONS

AWS Certified AI Practitioner

Amazon Web Services (AWS)

Issued Aug 2026 · Expires Aug 2029

Credential ID 5d678d58602647c08309178cf873cc8d
